PROJECTS

CampusLoop AI: Multi-Agent Campus Borrowing Platform GitHub
Tech: *React.js, Tailwind CSS, Python, FastAPI, LangGraph, LangChain, PostgreSQL, pgvector, Supabase*

- Engineered a full-stack campus lending marketplace where students list, discover, request and lend items, with borrow-request approval/rejection workflows and unread-notification tracking.
- Architected a supervisor-based multi-agent AI assistant using LangGraph and LangChain that routes each query to one of four specialized agents (Discovery, Lending, Policy, General) and passes every answer through an evaluator step before responding.
- Built a Retrieval-Augmented Generation (RAG) pipeline with PDF loading, chunking, Sentence Transformers embeddings and pgvector similarity search, grounding policy answers in the official campus policy document to reduce hallucination.
- Secured the application with JWT authentication and server-side authorization checks; integrated Supabase Storage for item image uploads.

Interxora.ai – AI Interview Practice & Performance Platform GitHub
Tech: *React.js, FastAPI, Python, LLM APIs, RAG, Embeddings, PostgreSQL, pgvector, JWT, Google OAuth*

- Developed a full-stack interview-preparation platform that generates personalized technical and behavioral questions from a candidate's resume and target job description using embeddings, pgvector semantic retrieval and LLMs.
- Implemented timed interview sessions with speech input, automated LLM-based answer evaluation, a final performance report and a dashboard to track past interviews.
- Built a secure authentication system with JWT access/refresh tokens, Google OAuth, and an enumeration-safe email password-reset flow over Gmail SMTP that never reveals whether an account exists.

Money Fintrack – Full-Stack Finance Management App GitHub
Tech: *React.js, Tailwind CSS, Python, Flask, MongoDB, Redis, Razorpay*

- Built a responsive finance application with user registration and login, balance management, money transfer, transaction history and profile management.
- Designed Flask REST APIs backed by MongoDB and integrated the Razorpay payment gateway for real money flows, validated through live payment testing.
- Added Redis-based caching for login and payment operations along with rate limiting to protect sensitive endpoints from abuse.

WORK EXPERIENCE

ApexPlanet Software Pvt. Ltd. Bihar, India
Web Developer June 2025 – August 2025

- Delivered **5 web development projects**, translating functional requirements into responsive, structured, and user-friendly web interfaces.
- Engineered interactive frontend components using DOM manipulation, event-driven programming, and dynamic content rendering to enhance application functionality.
- Implemented reusable UI components, responsive layouts, and client-side validation to improve interface consistency and user experience across projects.
- Managed project development and version control through Git and GitHub, maintaining organized code repositories and tracking implementation progress.

TECHNICAL SKILLS

Programming: C, C++, Python, JavaScript
Frontend: HTML/CSS, React.js, Vite, Tailwind CSS, Streamlit
Backend & Services: FastAPI, Flask, SQLAlchemy, REST APIs, JWT Authentication, Google OAuth
Agentic/GenAI: LangChain, LangGraph, Multi-Agent Systems, RAG, LLM Tool Calling, Sentence Transformers, Groq API
Databases: MySQL, PostgreSQL, pgvector, MongoDB, Redis, SQLite
Tools & Cloud: Git, GitHub, Pytest, Vercel, Supabase, Razorpay
Software Engineering: Data Structures and Algorithms, OOP, DBMS, SDLC, Computer Networks, Operating System

EDUCATION

Madhav Institute of Technology and Science Gwalior, Madhya Pradesh
Bachelor of Technology in Computer Science and Engineering 2024 – 2028
